

Excellence in seaming

8306

Hot-air sealing machine for
continous seam sealing

Applications:

Seam sealing of materials for the production of garments, clothing for military and public authorities, protective clothing and tents and awnings as well as seam preparation for foam padded automobile seats and side rests

Features:

- Economic solution for classical tape welding, equipped with a excellent price-/ performance ratio
- Appropriate to all standard tape welding operations
- Even and constant temperature profile
- Reliable sealing of cross seams due to the penetration depth adjustment of the top feed roller and separate roller pressure adjustment. Nozzle rises with the top roller
- Vertical post with 30 mm roll width (65 mm diameter)
- Touch screen for a simple handling by pictograms
- Lift of upper feed roller 30 mm for seam sealing of thick and puffy materials
- Automatic reverse motion when stopping within seam without tape cutting
- Tape cutter (standard)

Technical data:

- Welding speed: max. 20 m/min.
- Tape width: 22 mm
- Welding temperature: up to 700 degr. C.
- Heating capacity: 3,600 W
